Add some spring light to your home

The latest trends in lighting, so your home can respond to changing daylight

The clocks have changed, so we have longer evenings, but the daylight can still be very variable at this time of year, with those April showers. How do you modify your lighting, so you keep that feeling of Spring all through the day? We, at Intelligent Abodes have long understood the power of light and its ability to define, highlight and transform.

Set the tone

One of the biggest trends in the world of lighting has been the introduction of lighting control - dimming has been around for donkey's years, so what's new - it got smart! Lighting control lighting control allows you to combine a variety of light fittings, dimmed to the perfect level to suit the task and show off your home. It is a great solution for multi-functional areas, like open plan kitchen, dining & living spaces, where you undertake lots of different activities - simply press a button and your lighting transforms the space for cooking, dining, relaxing, entertaining.

Seasonal lighting

There are other benefits too - by adjusting the brightness and the colour of light, we can mimic natural light more effectively, promoting health and well-being. Smart lighting systems are intuitive, responding to your needs by enabling you to manage the lux levels, so it changes in response to the changing light outside, enabling you to always have the perfect light level, great for those four seasons in one day!
