Objects of desire

BEAUTIFULLY CRAFTED SMART BLINDS

Add a new dimension to your home decor and protect your home, by installing materials that safeguard your possessions and the fabrication of your home from harmful ultra-violet rays, managing glare so you don't have to move to a shady place in your home on a sunny day.

In summer they keep rooms cooler and in winter they keep the warmth in – a simple concept with a smart solution.

Our homes are designed to make the most of the view and the light, so it is important that any shading solution is discreet, graceful and easy to control. When at home, select the pre-set button on the light switch so the blinds descend just to the right level to protect your favourite sofa.

But what about the days you forget? Do not panic. One press of the button on your smart phone and all is well!

Intelligent Abodes supplies and installs Lutron blinds, including the new Palladiom range, offering the ultimate in luxury, design and quality.

Motors are whisper quiet and the patented technology ensures blinds stay aligned for a balanced, beautiful look, giving you synchronisation in one room or throughout your home. Window solutions can be integrated into the fabric of the building, if you are building or renovating, or choose battery-operated blinds to ensure none of your existing decor is disturbed. ◆

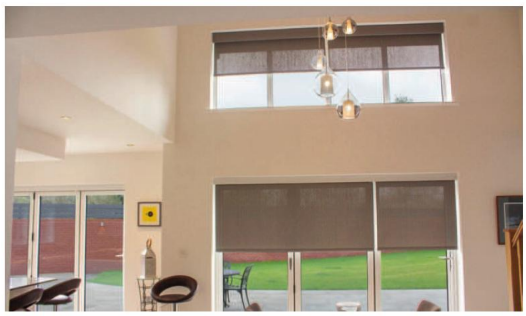
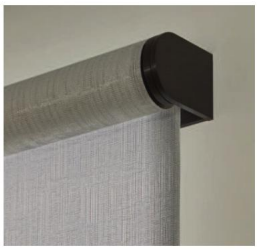
Are Smart Blinds Worth It?





Many of the features of automated blinds are similar to standard blinds - privacy and managing the light into the home, so why invest? The answer is performance fabrics and intuitive control. Motorised blinds and curtains are not new to the world of interior. design, but the light and heat managing fabrics now available have undergone a radical and convenient update.

Protect your beloved home from the damaging effect of the sun - at the touch of a button. Lutron blinds offer a range of performance fabrics specifically designed for heat management and protection. They can even be integrated with a sensor, automatically closing if it gets too warm. On a sunny day, discreet blinds descend to manage the glare and heat, but still preserve the view, so you don't have to move to a shady corner! Rooms are kept cool on a warm day and cosy on a cold day - simple concept achieved with smart blinds.

Control and integration is the main advantage of smart blinds - as they can be controlled using a wall switch, smart device or even your voice; perfect if you are settled on the sofa and it goes dark outside. You can add another dimension to your security - with blinds and curtains closing and opening in their usual pattern, even when you are on holiday! They can even be integrated with your security system and lighting, to give a real lived-in look.

Motors are whisper quiet and the patented technology ensures blinds stay aligned for a balanced, beautiful look, giving you synchronisation in one room or throughout your home. Window solutions can be integrated into the fabric of the building, if you are building or renovating, seamlessly blending with any architectural style. Alternatively battery operated blinds are a great option for finished rooms.

If you want to enjoy the view and protect your home, then smart blinds and curtains may be worth considering!
